

## **Task 2:- Create APIs for the frontend part you have created in ReactJs.**

1. API to add/edit data in these components:

There should be two button:-

- **Add:** On clicking Add button, If there is any data it should get clear and user should be able to add new data. (it will create new entry in table)
- **Update:** On this button click, user should be able to update the data. . (it will update entry in table).
- **Count:** API to show number of times (count), user has called add and update API

### **Things to consider:-**

1. Clean code, with proper commenting
2. Mention the execution time for each API
3. Provide the table/collection for database.
4. Provide basic validations, if needed
5. Can use any database.
