UI Task
Assessment Task

As discussed, please find the task below:

Create a Layout based on following specifications

- It consists of three different components with some content (feel free to add any HTML content or Images).
- User Should be able to Re-size the components by dragging them from any of the sides.
- The neighbour components should expand or shrink based on re-sizing operations performed on target component.
- You can use any open-source Library.
- Layout should be responsive on all laptop devices.
- The code should be clean and of production quality.
